Dispensing *Tank*

We have developed Male and Female refuelling parts, creating a full refuelling range including bottles, filler assemblies and filler necks. All are fully compatible with all other FIA refuelling products.

Types:

Carboy Refuelling Bottle - CAR1

The Carboy Refuelling Bottle can be used with all FIA applications, including our Quick Fill Range.

Carboy Filler Assembly - QFM250TF

This Filler Assembly is easily fitted to a refueling bottle using the six hole flange, allowing an easy filling into the Carboy Bottle. Its design was inspired by our famous Aero range, and features a lever made from the same quality of stainless steel that surgical hip joints are made from.

Carboy Filler Screw-on Neck - QF250TNA

Our Screw-on Neck completely solves the problem of pull-off or leakage when fixing a flexible hose to the neck.
